Samantha Limon

Goals for this project:
- Are there any skills you want to practice or improve at through this project experience?

I want to get more practice navigating the database using PostGreSQL and PgAdmin. I also want to get more experience working with React.

Background experience:
- What skills can you bring to the final project?

I enjoy doing frontend development, and have the most experience with that in regards to this project, so if there's any frontend aspect needed, I'm open to working on it.

Availability/Schedule:
- When do you plan to be able to work on the project?

I'm mostly available Monday-Thursday most evenings after 7 PM and Fridays after 2 PM, but I'll work on the project as much as I can whenever I have time. I'm also free on weekends if that's an option people are comfortable with to discuss things if needed.

Contact method:
- How and when do you prefer to be contacted?

I prefer to be contacted through Discord.

Dahyun Kwon

Goals for this project:
- Are there any skills you want to practice or improve at through this project experience?

The main goals for this project are to develop Web Application Skills with React and Nextjs. I would like to enhance my understanding of designing and implementing a complete web application. I also would like to strengthen my understanding of database design by structuring data.

Background experience:
- What skills can you bring to the final project?

To be honest, I haven't had any special background experience for this final project. I may fall behind but I will do my best to bring experience from the previous assignments of class.

Availability/Schedule:
- When do you plan to be able to work on the project?

I'm available after 1pm on Mondays thru Fridays. And I'm also free on the weekends since I finished relocation. I can adjust my schedule to accommodate you.

Contact method:
- How and when do you prefer to be contacted?

I prefer to be contacted by messages but I try to check discord as much as possible.

Christian Iha

Goals for this project:
- Are there any skills you want to practice or improve at through this project experience?

I think the main skill I'd like to get out of this project is freely navigating a larger project with multiple components and libraries that we only learned to use recently but not in conjunction with one another. We also had the guidance of our professors for those previous experiences. Besides that, I'm comfortable with the front-end side of TypeScript having previous experiences with that on JavaScript and am also comfortable with database management, having prior experience with that as well.

Background experience:
- What skills can you bring to the final project?

I've worked on a couple mobile apps with JavaScript previously so I am familiar with the design process though this will be my first time working in a group for building an application. I'll try my best to make sure everyone is coordinated and has their own space to work on so we won't end up having any conflicting commits. Besides that, I'm comfortable with any of the technical components required of this project and feel like my database engineering is a cut above the expectations for what our skills should be at.

Availability/Schedule:
- When do you plan to be able to work on the project?

For the most part, I am free MWF after 12:00 and TR after 5:00. I'd prefer working on weekdays over weekends but it's not a big deal if we work on the project over the weekend as I'm dorming and usually go home on the weekends which my main setup is at the dorms.
I don't have a hard cutoff in the night where I stop doing homework, but I probably won't check the discord as much after 9PM ish.

Contact method:
- How and when do you prefer to be contacted?

I check discord the most often and prefer communication (such as links for resources, repos, etc) through discord as well.

Josh Hicks

Goals for this project:
- Are there any skills you want to practice or improve at through this project experience?

Practice completing a full project from beginning to end. Getting more experience with the tech stack we've been using Typescript/React/PostGreSQL. Practice collaborating with others through Github/Discord.

Background experience:
- What skills can you bring to the final project?

I primarily code in C# and have been trying to learn more C#. Decent at Typescript and understanding of the React components and HTML/CSS we've been learning this course. For what it's worth I am fairly competent at writing music so if we need something related like that for the project I could try and provide that way as well.

Availability/Schedule:
- When do you plan to be able to work on the project?

Should be pretty available Monday-Friday in the afternoon especially. Don't mind working late into the night if needed.

Contact method:
- How and when do you prefer to be contacted?

Discord/Discord call/Zoom. Whenever is fine for messages. If we video chat just let me know when is the best time and I'll try to make it.

Dominic Deuz

Goals for this project:
- Are there any skills you want to practice or improve at through this project experience?

I would like to improve my skills with Typescript and using PostGreSQL and working on a project where we have to come up with our own plan on how we want to run a project as it puts more focus on creative freedom which will help with being more self/group directed

Background experience:
- What skills can you bring to the final project?

I feel fairly confident in the Typescript we have learned this semester, though I know there is always room for improvement. I also think that I do better with backend than frontend but am willing to do whatever is needed for the project.

Availability/Schedule:
- When do you plan to be able to work on the project?

I am unavailable on Monday, Tuesday-Friday I am free after 4:30pm, and Saturday and Sunday I have work from noon till around 9pm or 10pm. On weekends if we were to meet I would ask that it'd be before noon or afterwards but weekdays are the most preferable for me.

Contact method:
- How and when do you prefer to be contacted?

Discord will be my main form of contact for this project
